

streamlit Task – project 1

Name : Shruti Hanumant Shinde

College Name : T.B.Girwalkar , polytechnic ,
Ambajogai

Domain : AI & ML Development

Branch Name : Computer engineering

Git hub link : https://github.com/shrutishinde19746-oss/Prince_Model_Repo

Objective:

- To develop a Machine Learning model that predicts the price of a Ford car
- Using the Linear Regression algorithm and deploy the application using
- GitHub and Streamlit Cloud.

Steps :

Step 1 :Open the Github repo

Step 2 : GithubCreate a project file locally

Step 3:Write your statement code app.py

Step 4 :Create a requirements.txt file In the same folder

Step 5 :Create a new Repository on GitHub named Streamlit

Step 6 :Upload both app.py and requirements.txt to the Repository

Step 7 :Deploy on Streamlit Cloud

- 1)Go to share.streamlit.io. and login with GitHub
- 3)Click Create app
- 4)select your GitHub Repository
- 5)Select Branch : main and main file app.py

Step 8:Click deploy

Step 9 :Git live link.

- **Machine Learning Algorithm:**

Linear Regression

- **GitHub Repository**

<https://github.com/shrutishinde19746-oss/Streamlit>

- **Streamlit Application:**

<https://fordcardatasetapp-tqpj5opym7f.streamlit.app/>

Output:

Home pym7f.streamlit.app + 27

Car Price Prediction App

Model
Fiesta

Year
2020 - +

Mileage
50000 - +

Tax
150 - +

MPG
50.00 - +

Engine Size
1.50 - +

Transmission
Manual

Fuel Type
Petrol

Predict Price

Conclusion :

- The Ford Car Price Prediction application was successfully developed using
- Machine Learning and deployed on Streamlit Cloud through GitHub. The
- application runs successfully and predicts car prices based on user input.
